Bespoke Staircases

Staircases for public and commercial spaces  
including office fit outs

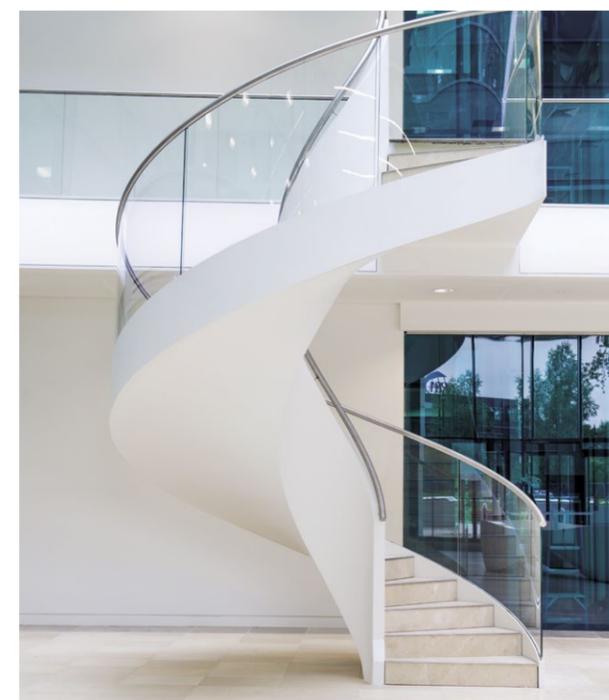

# Bespoke staircases for public, commercial and fit out projects

Spiral UK have over thirty years' experience working with architects and contractors to deliver staircases, on time and budget, in a range of public and commercial spaces including: schools, universities, offices, restaurants, museums and residential developments.

## Commercial staircase experts

We specialise in the design, manufacture and installation of all types of bespoke staircases including spiral stairs, helical, straight and cantilevered.

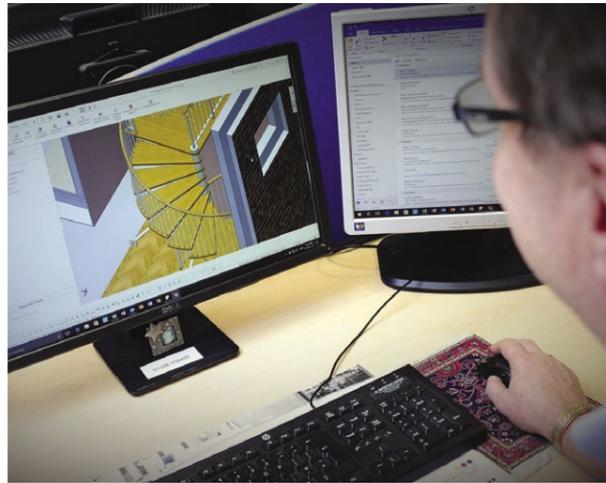

This experience means we know how to fit striking staircases, designed to suit their environment, that are durable, functional and meet all regulatory requirements.

We have a skilled team of design engineers, fabricators and installers who understand the challenges of a commercial project and can work with clients to anticipate and resolve any issues; ensuring we deliver staircases of a high standard in a timely and effective manner.

# Our process

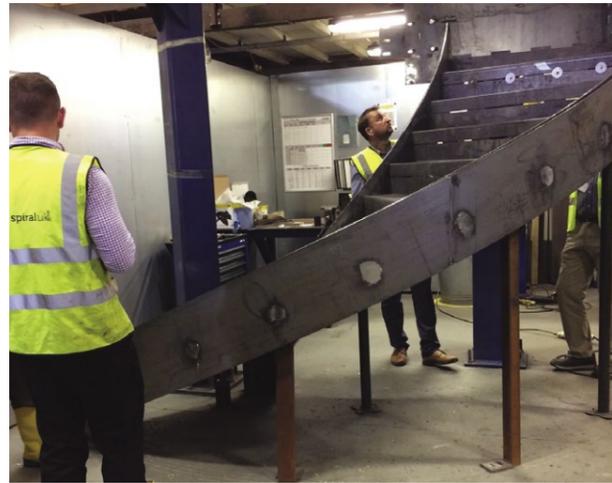

## Design/01

We take staircase design ideas, concepts and sketches and develop them into detailed 3D models and renders to support the construction drawings. This means everyone in the project team has a clear understanding of what is required to ensure the design and build process runs smoothly.

## Manufacturing/02

At Spiral UK our ethos is to manufacture staircases in-house to ensure that the quality we pride ourselves on is always maintained. We have a large production facility designed to maximise the flow of work with state-of-the-art equipment including a CNC plasma cutting machine and overhead crane. Our team of highly skilled fabricators ensure our high standards are met, on time and to budget.

## Installation/03

In order to ensure that our high standards of install and service are met all our fitters are directly employed. Our hard working, experienced installation team are well trained, flexible and able to work out of hours. They all hold CSCS cards and PASMA, IPAF, SSSTS and slinger banksman certificates.

## Project management

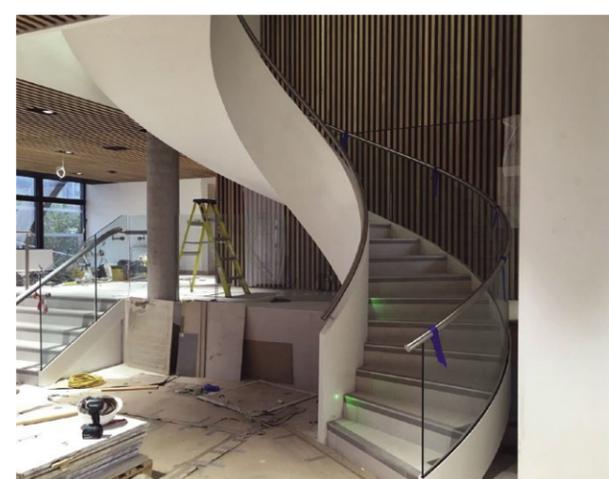

With over thirty years' experience in the industry we are known for our ability to design and install feature staircases that work practically and meet regulatory requirements.

Our project management and workflow process ensures active communication so you are kept up to date with progress and we can make sure projects run smoothly so you and your client's expectations are met.

We are happy to liaise with you, your architects and site to ensure that as the development evolves the staircase design and installations will work. We can talk through designs, visit site and discuss approaches to ensuring the staircase element of your project is delivered as required.

As part of our service we can:

- Produce detailed quotes with accurate costs
- Undertake site surveys and regular site visits
- Produce a pre-install plan
- Provide 3D drawings and calculations
- Take a proactive approach to anticipating and solving problems
- Meet demanding schedules and deadlines
- Implement a handover and completion procedure at site

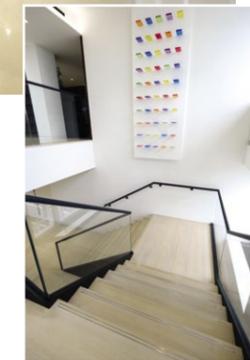

# Our staircases

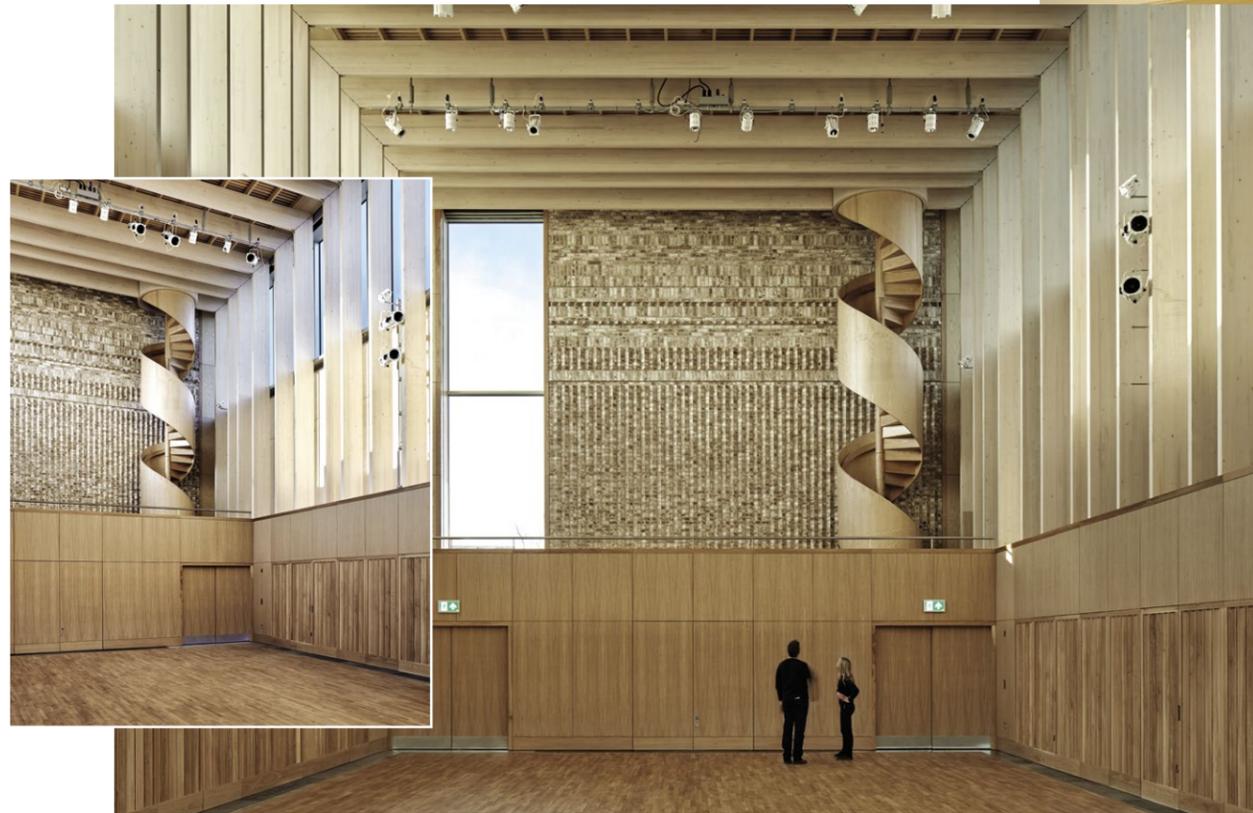

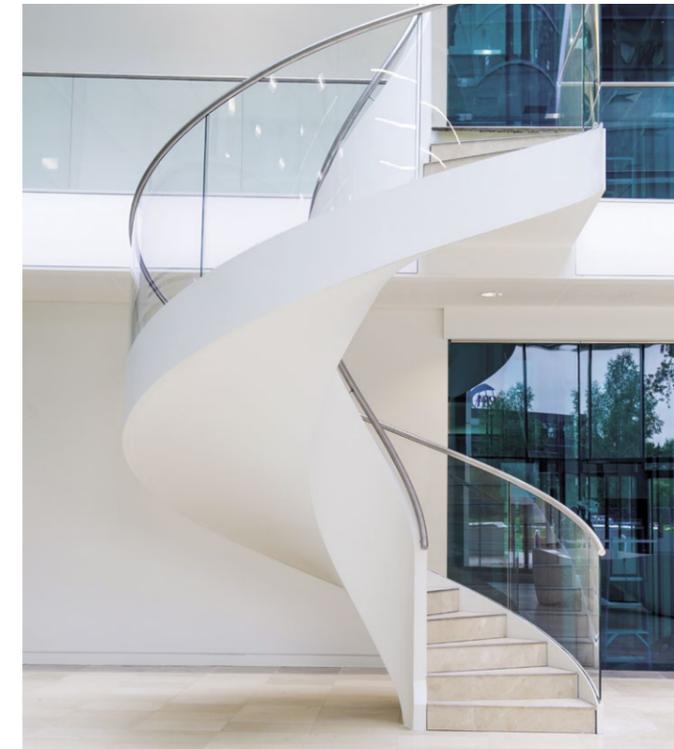

At Spiral UK we produce a range of staircases for public, commercial and residential spaces including spiral, straight, helical, spine-beam, dog-leg and cantilever.

**Cavendish Square, London**  
 Contractor/ Overbury  
 Architect/ Make Architects  
 Feature open riser staircase with oak treads, structural glass balustrade and black leather wrapped timber handrails.

**Green Park, Reading**  
 Contractor/ ISG  
 Architect/ Barr Gazetas  
 Stone clad helical staircase with radiused toughened glass and polished stainless steel handrail.

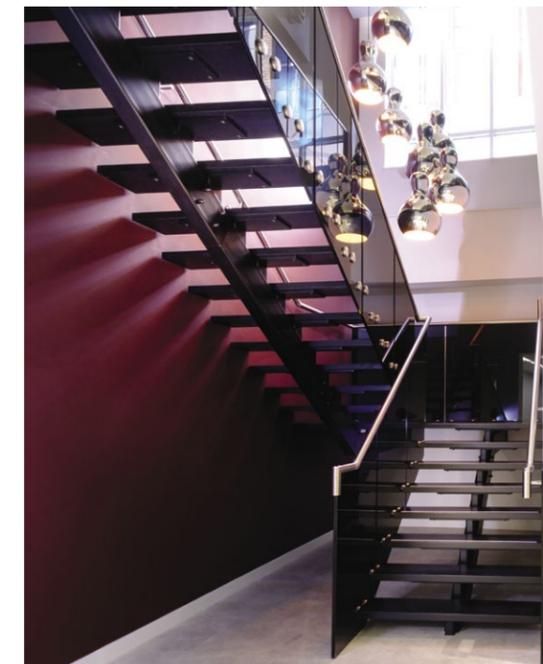

**Storey's Field Community Centre, Cambridge**  
 Contractor/ Farrans Construction  
 Architect/ MUMA

A RIBA award winning project nominated for the Stirling prize. We designed and supplied the sculptural spiral stair in smooth steel plate clad in ash.

**Taliesen building, Swansea University**  
 Contractor/ Kier Construction  
 Architect/ Rio Architects  
 Steel helical stair with closed risers, a stainless steel handrail and sculptural central fin.

**Carter Lane, London**  
 Contractor/ Area  
 Spine beam dog-leg staircase for an office fit out. American black walnut tread with clear lacquer finish, toughened grey tinted frameless glass and satin polished stainless steel handrail.

# Materials and finishes

Many of our staircases are crafted from a steel structure but we work with a range of materials including steel, timber, concrete, stone, glass and stainless steel.

## Treads

You can choose from different treads in wood, glass or concrete and we can supply samples.

## Finishes

We can supply the stairs pre-finished or ready to receive final in situ spraying, we can do the spraying or leave the stair primed ready for site decoration. Finishes include painted steel, powder coating, stainless steel, weathered steel, wet paint or lacquered.

## Handrails

Our handrails can also be designed and installed in stainless steel, wood, glass, timber or leather clad.

## Balustrade

In addition to installing balustrade and handrails as part of a staircase installation we can also design and fit balustrade for balconies, landings or terraces which complement the overall design of a building. We offer this in a range of materials including steel, wood, glass, timber or leather clad.
